

Introduce your patients to the benefits of EVOLENCE®

CHARLOTTESVILLE DERMATOLOGY is pleased to announce the arrival of EVOLENCE®, a new advanced collagen-based dermal filler designed to provide structure, strength and volume and immediately smooth moderate-to-deep wrinkles. With EVOLENCE® you can expect immediate, visible, natural-looking results that last at least 6 months, with virtually no downtime. We are pleased to be among one of the exclusive group of national physicians who have been specifically trained, so we can schedule an appointment for you to experience EVOLENCE® today.

What is the Difference between Juvederm, Restylane and EVOLENCE®

Juvederm and Restylane are hyaluronic acid dermal fillers, that are both used in the treatment of wrinkle correction. EVOLENCE® is unique in that it is a natural filler made from collagen - one of nature's most abundant building blocks. EVOLENCE® mimics the natural support structure of the skin, replacing lost collagen, with naturally derived collagen, that lasts. Treatment with EVOLENCE® is associated with minimal to no swelling or bruising following the procedure, allowing you to enjoy immediate results of a more naturally refreshed and younger looking appearance.

What is the Difference between BOTOX® and a filler like EVOLENCE®?

BOTOX® is a neuromodulator, comprised of *botulinum* bacterium, designed to freeze, or decrease, activity of the muscles that can cause wrinkles in the forehead and around the eyes. EVOLENCE® is a natural collagen dermal filler designed to correct moderate to deep facial wrinkles by replacing lost collagen with naturally derived collagen which provides the skin with shape, structure, support and strength and last at least 6 months. Additionally, data gained from foreign clinical studies and usage of EVOLENCE® in other countries have demonstrated that EVOLENCE® has lasted for up to 12 months.

EVOLENCE® is indicated for the correction of moderate-to-deep wrinkles and folds, such as nasolabial folds. EVOLENCE® should be injected in the mid-to-deep dermis. Possible side effects of EVOLENCE® are usually injection-site related and include mild swelling, redness and pain. Other rare side effects include the development of small areas of firmness under the skin at the treated sites that may be noticed when the areas are pressed upon.
